

Assessment Updates Oasys Information

Important Information Regarding Minimum Browser Requirements

What is it?

We are currently making improvements to the Oasys platform and our aptitude tests to further enhance the user experience for candidates.

What are the changes?

Changes are being made to the candidate side of the Oasys platform to improve the responsiveness of the login and subsequent pages across a range of devices. Changes to the administrator login pages are also being made. In order to do this effectively the pages will have a new look and feel. We will also be making several styling changes to aptitude tests to enhance how content is displayed.

As a result of these changes we will be upgrading the minimum technical specification required to access the **Oasys platform**.

If you are using Internet Explorer, the requirements will change **from no minimum browser requirement to Internet Explorer 10 (IE10)**. The minimum browser requirement required to access the **aptitude player is changing from Internet Explorer 9 to a minimum requirement of Internet Explorer 11 (IE11)**.

We do not foresee many issues with users being on older versions of this browser (IE10 was released in 2012) and many users use newer alternatives such as Chrome or Edge.

If IE users **do not** meet these minimum requirements, they will receive an error message asking them to update their browser or to switch to another browser or device.

When will it be released?

This change will happen on the 4th September.

Further information on these changes will follow, **however we recommend that the information relating to minimum browser requirements be communicated to any clients who may need advance notice of this change to ensure that they have enough time to upgrade if required.**
